

Improved components, improved reliability, no price increase!

Your choice for a gas steam humidifier is **BLACK** and **WHITE**.

Nortec GS-Series humidifiers are already the most reliable gas-fired humidifiers in the industry, but we felt there was still room for improvement. We've enhanced the GS components to provide longer service life, a greater range of acceptable water conditions and improved reliability. All this is included without any increase to our already competitive pricing.

The improved GS-Series

Longer service life and improved reliability.

Heat treated 316L stainless steel heat exchanger

Heat treating the heat exchanger relieves the stress in the metal – protecting against possible stress corrosion cracking.

Magnesium alloy anode

The magnesium alloy anode can protect the tank and heat exchangers from corrosion in harsh water by sacrificing itself, and is easily replaceable if it is heavily corroded. This allows for a larger range of acceptable water conditions.

Back-purged welds

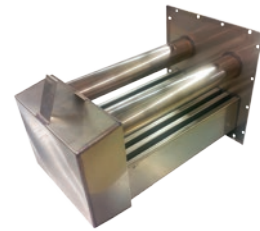

Back-purging welds prevents oxidization in the metal, making for stronger welds that mean longer lasting tanks and heat exchangers.

Sump-less tank

The tank of the GS-Series units no longer has a sump. The sump-less design strengthens the tank.

3-year heat exchanger warranty

We are now extending the warranty for GS heat exchangers to 3 full years – unparalleled in the industry.

As a leading manufacturer of commercial/industrial humidification systems for more than 40 years, Nortec has the technology and application expertise to meet the needs of any application.

Contact us today and ensure you have the best humidification solution for your application.
