INTRODUCING NORTEC'S NEW MH SERIES **"The next generation solution for humidifying and cooling"**

Nortec is pleased to introduce the completely redesigned MH Series evaporative humidifier / cooler. The MH continues to redefine the term "low energy usage", while offering new and innovative features to meet the needs of today's stringent building standards. The MH will play a major role in developing sustainable solutions for today and tomorrow's building demands.

Designed for installation in ducts or air handling units, the MH Series provides energy efficient air humidification as well as sensible air cooling due through the adiabatic cooling effect. Its innovative modular design removes components from the airstream reducing pressure drop and allowing for industry leading UL 900 Class 1 fire ratings. The improved, low profile, stainless steel basin is specially designed to prevent standing water, while reducing unit weight.

The MH Series is available in 3 models, including the incredibly efficient MHTC REflow model, which features a recirculation system to recover and reuse excess water. The MH series is constructed from high quality stainless steel and is suitable for any water type, including potable, reverse osmosis, or de-ionized water. All models are provided as packages, complete with all components required to install and operate, making the evaporative media easier to apply to any project.

Saving water and energy as well as reducing operating costs is an important challenge for all of us in today's world. Walter Meier Inc. continues to innovate as a world leader in humidification products and technology. All products are manufactured at the company's ISO 9001-2000 registered facility.
