

Installation and Installation Support Packages

Condair will project manage and install, as well as start-up and conduct product ownership training [if included] with the purchase of your humidifier project. To achieve proper installation, Condair provides two options.

1 Utilize Condair to solely provide installation services from start to finish.

A professional installation by Condair ensures your humidification system is safely, efficiently, and correctly installed for a long, trouble-free operational lifetime.

2 Utilize Condair to support your installation team.

We want to see your Condair humidification system installed properly. Let Condair guide your preferred installation team through the manuals while providing the best installation support.

Include Condair in your next humidifier project to either install or provide installation support to your local contractors. Choose either option with the result being the same: a Condair **Expert on Site** will ensure that your system is installed as it was designed.

Benefits Of Condair EXPERT ON SITE Installation

- ✓ Technical expertise delivered directly from the manufacturer
- ✓ Efficient and long humidifier operational lifetime
- ✓ Accommodation for contractor and engineering partners

EXPERT ON SITE

Installation & Installation Support

For your Condair Humidifiers and Evaporative Cooling Systems

- Factory technical expertise
- Improves humidifier lifetime
- Peace of mind

Why Choose Condair For Your Installation & Installation Support?

When choosing **Expert on Site (EoS)** to install or support the installation of a Condair humidifier project, the facility owner, engineer, and contractor will reap the benefit of having the manufacturer's expertise delivered directly on site. Your humidifier installation will receive quality workmanship, guaranteed to the highest standard, giving everyone peace of mind. Nobody knows their humidifiers better than Condair... We are the experts!

Your Own Dedicated Project Manager... Straight From The Factory

A project manager will act as a single point of contact while guiding you through the different stages of the project. A methodical and organized approach ensures you remain fully updated throughout the project and that you are totally satisfied with the completed installation. Initially, a clear statement of requirements will be produced through consultation and on-site visits. When the installation concludes, the project manager will ensure all the requirements have been fully met before the final handover.

Quality | Inside and Outside the Box!
